TradeMaster Export Module

The TradeMaster Export module expedites the processing of export transactions for companies that elect to manage exports by using their own in-house expertise and resources. Together with integration into Farrow's brokerage facilities, complete shipment processing is streamlined and simplified.

EASY DOCUMENT PREPARATION

- Automatically produce a wide range of export documentation including Export Invoice, Bill of Lading and Free Trade Certificates. Generate consolidated Bill of Lading and/or Export Invoices by combining multiple export documents and producing blanket FTA Certificates of Origin.
- Save valuable input time by leveraging a Lightning Library of templates containing frequently used data.
- Streamline export documentation creation using defaults configurable by customer (currency code, carriers, origin, destination, etc.)
- Build product and customer databases on-the-fly as you create export documentation.
- Add Shipment Notes to log activity against export transactions.
- Easily update annual blanket NAFTA declarations.
- Electronically load customers and products from a spreadsheet. Simply map the columns in your data file to the TradeMaster field and automatically update your database.

INTEGRATION WITH FARROW BROKERAGE

For companies that utilize Farrow's U.S. brokerage services, TradeMaster Export offers a seamless way to move export data to the entry stage. Approve the shipment and the data is transmitted directly to Farrow's U.S. brokerage system for entry processing and improved compliance.

ELECTRONIC CAED INTERFACE

Eliminate duplication of manual data entry and transfer your TradeMaster B13a Export Declaration directly into the CAED software for electronic transmission to CBSA.

MANAGEMENT REPORTING

The TradeMaster Export module has extensive management reporting that enables you to analyze your export shipments by customer, buyer, product, and so forth.

- Customize reports to fit your needs using built-in controls. Extract product or invoice line data from export documents into Excel or text-delimited files. Pick and choose which fields to output and the order that they will appear.
- Leverage proactive reports like the 'Certificate of Origin Expiry Report' to keep Certificates of Origin up-to-date.

BENEFITS

Save Time. With built-in templates and automated customer and product features, document preparation is accelerated.
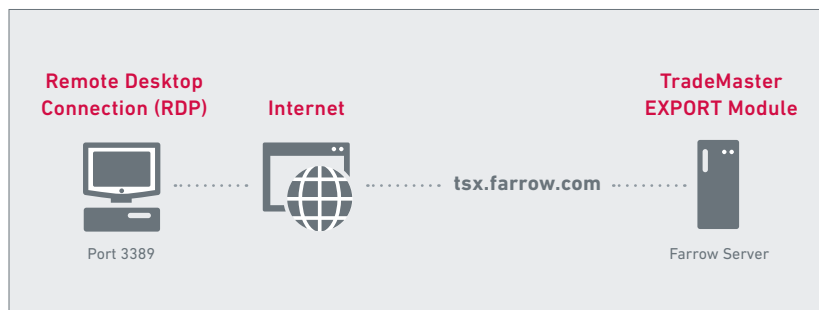

Boost Compliance. Automated input validation helps to ensure that your documentation is accurate, and allows for necessary on-the-spot corrections before transmitting. Proactive reporting allows you to stay on top of Certificates of Origin expiry dates.

Streamline processing. The intuitive graphical user interface, multi-tasking capabilities and modifiable features facilitate ease of use.

Customization. With template features, customer defaults, toolbar customizations and user security capabilities, TradeMaster Export can be tailored to suit your unique working environment.

FARROW

TRADEMASTER SELF CLEARANCE SOFTWARE
TSX ACCESS REQUIREMENTS

The TradeMaster Export Module is provided as a hosted service (referred to as TSX). The application is housed and maintained at Farrow' data centre, making access easier.
No software installation necessary.

Remote Desktop Connection (RDP)   **Internet**   **TradeMaster EXPORT Module**

tsx.farrow.com

Port 3389   Farrow Server

REQUIREMENTS

To access the hosted Export application, the following components are required:

- Port 3389 must be opened on your company's firewall.
- Windows Remote Desktop Connection (RDP) configured to access: tsx.farrow.com
- The settings for this connection can be provided by Farrow in the form of a customized icon. Otherwise, instructions can be provided to help you set up your own connection.
