

Air Source Heat Pumps

Natural Resources Canada Proposed Amendments

June 22, 2010

The following was issued by Natural Resources Canada and circulated by the Canadian Society of Customs Brokers.

Air Source Heat Pumps

Natural Resources Canada has issued proposed amendments to Canada's Energy Efficiency Regulations for Air Source Heat Pumps. These amendments (available at the link below), are being issued prior to posting in the Canada Gazette. It is anticipated that they will become effective January 1 2012.

These amendments will ensure that consumers are made aware of the cold climate performance of the heat pump they are purchasing.

Both imported goods and those shipped inter-provincially for sale or lease, will be affected by the amendments.
